

# PHYSICIAN CONSULTING NETWORK

EXOSOME Therapy just got easier than ever! From the physician consultation to the treatment administration, it can all be done from the comfort of your home at a fraction of the cost!

ADVANCED BIOLOGICS has now made it very convenient for anyone to virtually consult with one of the most experienced regenerative medicine doctors in the U.S. Our physician consulting network led by Dr. Patel has over 25 years of experience treating patients with stem cells, PRP, and for the last 27 months, with our MSC EXOSOMES with tremendous success!

## How Does It Work?

1

Before submitting the consultation request form, if you haven't done so already, please schedule a time to speak with an ADVANCED BIOLOGICS representative or distributor. The representative will explain how exosomes work, the benefits, and risks factors. We will provide details about our product specifically, what makes our product superior, the safety, along with our status with the FDA.

2

Once you have decided to undergo exosome therapy and would like to schedule a Zoom consultation for dosing recommendations and administration protocols simply complete and submit the **Consultation Request Form**.

3

Your request form will be uploaded into a HIPAA Compliant Dropbox folder that only Dr. Patel and or an affiliated doctor has access to.

4

Once received, within 24 hours or less Dr. Patel will send you an email suggesting a few dates and times for the Zoom consultation. Simply reply to confirm or suggest an alternative date.

5

This will be a private consultation between you and the doctor only unless there is a caregiver involved. He will need to get a full understanding of your medical condition(s), medical history, and list of prescriptions you are currently taking. First, he will determine if exosome therapy is right for you. If so, he will provide dosing recommendations along with the administration protocol(s).

6

Once you place your order through **ADVANCED BIOLOGICS** our team will locate a local licensed registered nurse or medical professional to come to your residence to administer the exosomes. If you happen to know a nurse or medical professional who could administer the exosomes that would be welcomed.

\*The patient is responsible for the administration cost.
